

Worldwide Socioeconomic & Trade Analysis

It contains economic and social indicators such as per capita income, GDP, child mortality, life expectancy, and fertility rates from different countries to analyze the relationship between economic development and social welfare.

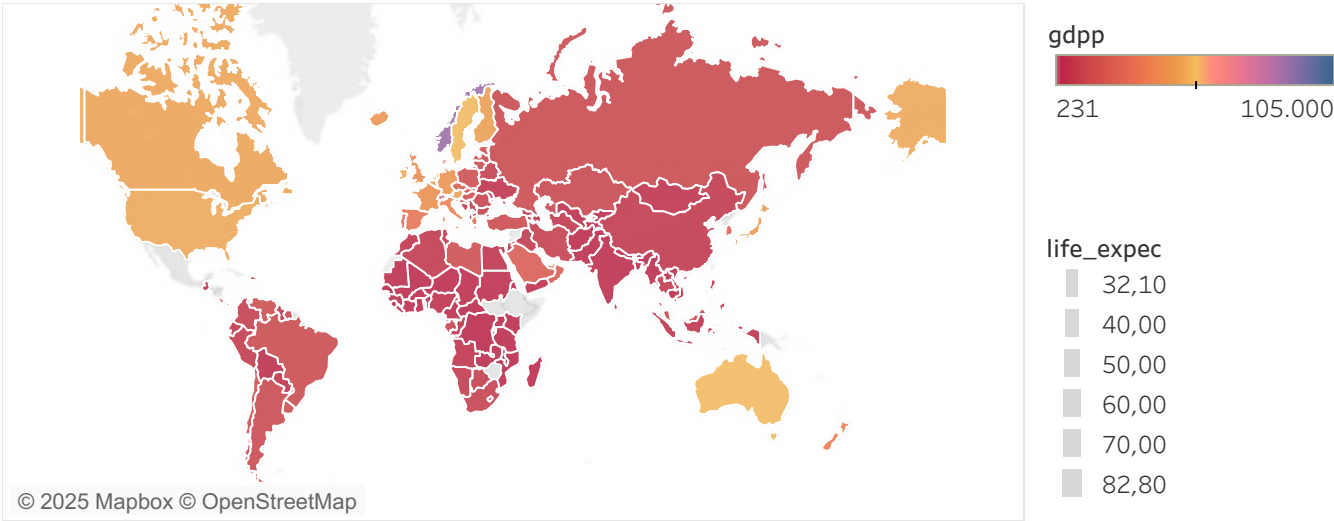

Countries with high GDP per capita (e.g., Norway) have:

- Low child mortality rates
- High life expectancy (life_expec)
- Low fertility rate (total_fer)

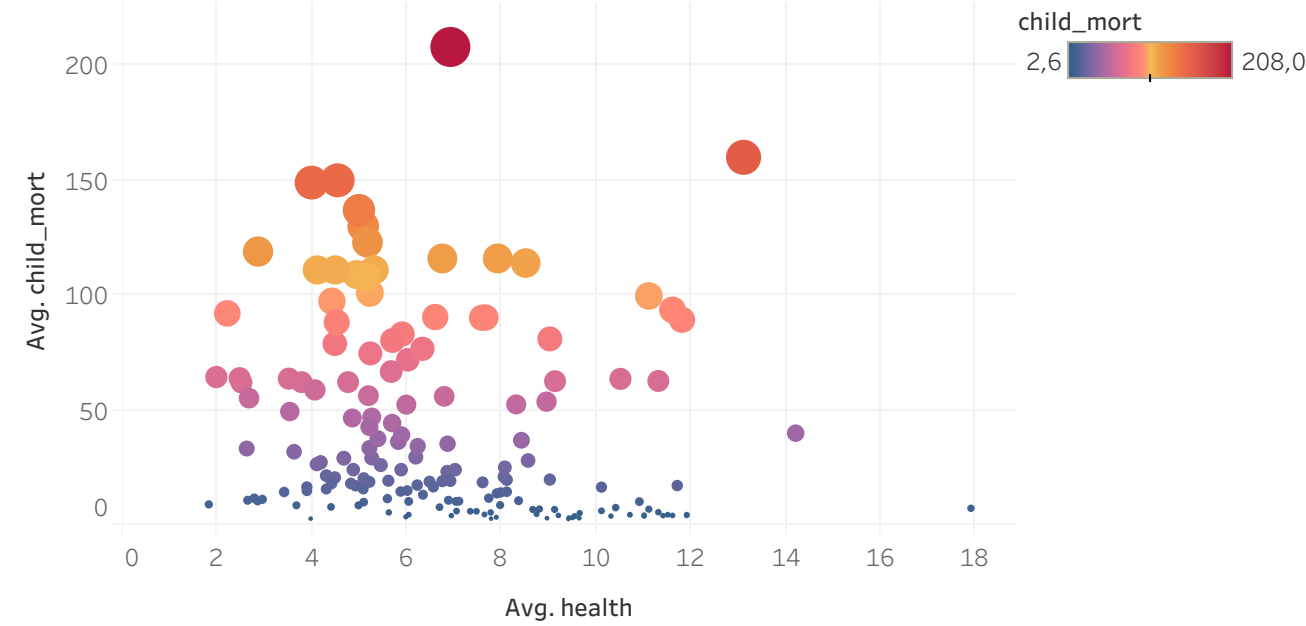

Low-income countries (e.g. Niger, Chad):

- High child_mort (100+ per 1000 births)
- Low life_expec (50-60 years)
- High total_fer (>5 children per woman)
